Text 1 This test is for Kerns number 1-2

A planet is a body in space that revolves around a star. There are nine planets in our solar system, and these nine planets travel around the sun. The names of the planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto.

Planets travel in orbit, around the stars. All of the planets of the solar system revolve in elliptical orbits. In other words, their orbits are like large, flat circles. The time that it takes a planet to make one revolution around the sun is called a year.

The Greeks were the first people to recognize and give names to some of the planets. The word *planet* comes from a Greek word meaning *wanderer*. If a person wanders, it means that he goes from one place to another and does not have a home. The Greeks thought that planets "wandered" in the sky. However, modern scientists can predict the movement of the planets very accurately.

There are millions of plants and animals living in the sea. Most of the plants and animals living in the oceans are extremely small and float near the surface of the water in their thousands. They are food for huge numbers of small animals that also live near the surface. Together, they are all known as plankton.

Many fish feed on this plankton, including one of the largest, the whale shark. Despite their great size, certain whales live entirely on plankton.

The blue whale is the largest animal ever to live. It grows to a length of over 100 feet. The humpback whale is a smaller kind and has long flippers. It can jump right out of the water. The Californian grey whale makes long migrations every year - it spends the summer feeding in the Arctic but swims south to the warmer waters off the coast of Mexico in the winter. The females give birth in the shallow, warm water there.

Many of the fish in the sea may be eaten by other meat-eaters. Sharks, *for* example, are some of the fastest hunters, although not all of them eat other fish.

Deep down in the oceans live many strange fish. It is so dark down there that many of these fish have "light" on them, which are used for attracting smaller fish for the larger ones to eat.

Jellyfish are peculiar-looking creatures ranging in size from a fraction of an inch to 6 feet across. They don't really swim but drift in the currents of the open oceans. Although they contain a powerful sting, they are often eaten by turtles. Turtles are reptiles that spend most of their eggs on sandy beaches.

The average person will say (hat agriculture means farming. He is partly right, for raising crops is a branch of agriculture. So do livestock raising, dairy forming, fruit growing, chicken raising and even fur farming. Agriculture includes the raising of every kind of plants and animals that is useful to man.

With all its many branches, agriculture is the world's most, important industry. It supplies the food we eat and many of the materials from which we make our clothing.

Farms are classified according to the type of farming that is done and kinds of crops and livestock that are raised. They may be classified in several different ways, such as general, specialized, intensive, and extensive farms.

General farming is a farm where a variety of things is raised. On such a farm there may be a herd of dairy cows whose milk the farmer sells. There may also be poultry to provide extra income and supply some of the family's needs.

There are many factors that influence the types of crops and livestock that a farmer raises. The most important one is climate which includes temperature, length of growing season, sunshine, and rainfall. Another is the type of soil. The third is the amount of water available for irrigation. By concentrating on the particular crops or animals that fit best with this situation, the specialized farmer hopes to use his land in the most efficient and profitable way.

When a farmer devotes a great deal of labour to a piece of land, he is practicing intensive agriculture. If he works in a large area of land with relatively little labour, he is practicing extensive agriculture. Intensive agriculture usually goes together with small farms. A great deal of careful work is always involved in intensive agriculture. Often this work must be done by hand. Extensive agriculture is usually practiced on large farms or ranches where most of the work is done by machinery.

Many people now have a card which enables them to withdraw money from a cash dispenser. You feed your card into the machine and key in your PIN (Personnel Identification Number) and the amount of money you want. If you have enough in your account, the money requested will be issued to you up to a daily limit. Your account is automatically debited for the amount you have drawn on.

Provided you have a sound credit, you can get a credit card from a bank and other financial institutions. To obtain goods or services, you present your card and sign a special voucher. When it receives the voucher, the credit card company pays the trader (less a commission) and then sends you a monthly statement. Depending on the type of card you have, you will either have to pay in full or be able to pay part of what is owed and pay interest on the balance; left outstanding.

If you need to make fixed payments at regular intervals, e.g. for insurance premiums, you can arrange a standing order (sometimes known as a banker's order) so that the bank will do this for you.

Trappists are monks who are not allowed to preach or to teach. Their lives are devoted to meditation, studying and reading.

In 1949, one group of Trappists fled to Hong Kong from China, leaving behind their houses and their dairy industry. They dressed themselves as labourers and carried only a few possessions.

' Here, the monks had to start a new life. They found it difficult to obtain food and they had nowhere to live; but somehow they managed with the help of the community and charitable organizations. It was not until 1995 that the Hong Kong government granted them land on Lantau island.

The monks are not allowed to beg for a living, so they had to work very hard on the island. They started a dairy farm, kept about five hundred chickens and started growing their own vegetables.

' A large part of the work of the Trappists is concerned with their dairy. The cows are fed regularly, milked and kept healthy. The dairy, which produces about two thousand bottles of milk a day, brings the

monks their main income. The monks sell about half of the milk to a large hotel in Hong Kong, while hospitals and schools buy the rest. The monks also earn some money by selling eggs. Sometimes, the Trappists sell some of their cattle. The monks themselves do not eat meat, however, as they are vegetarians.
